IV TREATMENTS

A physician's assessment is necessary to determine if the individual is a suitable candidate and to identify the most appropriate treatment for their needs.

1. Multinutrient: \$145

A balanced blend of vitamins and minerals, supportive for nutrient absorption in the context of a variety of health concerns and optimization goals. Consider throwing in one of our add-on options to create a custom IV that is tailored to your needs.

2. Immune Boost: \$180

Contains higher doses of Vitamin C and Zinc to support your immune system's ability to fight infections. A great option to prevent illness or shorten the duration of viral infections. Try it before your next vacation to prevent that dreaded airplane sickness!

3. Performance and Recovery: \$190

Formulated with extra hydration, Amino Acids and vitamins that support muscle repair and improve recovery time after a hard workout or training regimen.

4. Calm: \$165

A multinutrient IV with additional ingredients that help to support feelings of relaxation and calm. This IV can be used for acute relief during a stressful time, or more frequently for chronic anxiety support.

5. Glow: \$165

Show off your natural 'glow'! A helpful boost for collagen production: targeted for supporting wrinkles, skin tone, and pigmentation. Also indicated for hair growth.

*This IV includes the glutathione add on at no additional cost.

6. Migraine Relief (preventative): \$165

A multinutrient IV with additional magnesium and B vitamins, which are shown to be effective in migraine prevention. This IV is ideal as a regularly scheduled preventative measure for migraines. *Optional - consider adding the Medical Migraine Relief addition if you are experiencing an acute migraine.

7. Iron Infusion: \$250

An excellent way to boost your iron and ferritin levels, while avoiding the side effects of oral iron supplements. *Please note: This IV requires a prescription. Prescription cost is not included in infusion fee.

IV TREATMENTS

Add ons

A. Medical Migraine Relief: \$30

A combination of prescription IV medications that are commonly used in the urgent care setting to treat an acute migraine. Please note - a brief Physician consult or previous approval is required.

B. NAD: \$25-\$100

Nicotinamide adenine dinucleotide is a coenzyme found in all living cells that plays a crucial role in metabolic processes - including energy production, DNA repair, and cellular signaling. NAD levels decline with age, and its decline is associated with various age related health issues. IV NAD may help to prevent and mitigate some effects of aging. NAD is a critical component of our health, and cannot be absorbed orally - therefore IV administration is the most effective way to improve levels.

C. Glutathione: \$50

A powerful antioxidant that is naturally produced in the body, and plays a crucial role in various physical processes. Benefits of IV administration include: antioxidant protection, detoxification, immune regulation, energy production, and neuroprotection. Glutathione is sensitive to oxidation, making it difficult to take orally. For this reason, IV administration is an excellent route for administration.

D. Methylcobalamin: \$6

An important vitamin for DNA synthesis, red blood cell formation, and neurological health. This is a great alternative to the B12 injection. Consider adding it instead!

E. Zinc: \$6

A vitamin that is not produced by our bodies, and must be supplemented. Improves immunity, aids in digestion, improves skin health and the healing of injuries.

F. Taurine: \$6

Supports GABA receptor function. Can lower blood pressure and help to calm the nervous system.

G. Carnitine: \$6 (subject to availability)

Supportive to the function of the heart, brain, and muscles. Can improve the metabolism of fat.
